

What does Colorado's livestock network look like?

Schematic representation

actual network generated by USAMM Shiny app (placeholder)

What USAMM provides

County-to-county shipment estimates for cattle and swine nationwide, with uncertainty quantification. Disease outbreak simulations (USDOS) run in seconds at national scale. Backed by 20+ peer-reviewed publications and USDA funding.

! The data gap

Our model predictions are only as current as the data behind them. With updated ICVI records from Colorado, we can detect structural and volume changes over the past 15 years and improve disease preparedness for your state.

What you receive in return

Change report on Colorado's ICVI patterns Top shipment partner analysis
Updated regional disease modeling Interactive Shiny app access
